

SAT Mistake Log

Log every question you miss, find the topics you keep missing, and fix them before the next Bluebook test.

Made by **Muhammad Salar Khan** Instagram [@salars_catalogue](https://www.instagram.com/salars_catalogue)

Updates github.com/dev-flowstate/SAT-Smart-Mistake-Sheet

Which file should I open?

Recommended on Windows

With buttons

[SAT_Mistake_Log_v11.xlsm](#)

- A button appears inside each cell you click
- Paste question screenshots with **Ctrl** + **V**, click to zoom
- Needs a one-time unblock — **Part 1**

Mac, older Excel, or no macros

No macros

[SAT_Mistake_Log_v11_NoMacros.xlsx](#)

- Same log, dropdowns, colours and dashboard
- No security warning, nothing to enable
- Pictures are added with Insert > Pictures instead

What is on the log

SAT Mistake Log (Digital SAT / Bluebook)												
Click a cell and a button appears in it. No buttons? See the guide: unblock the file, then Enable Content.												
Made by Muhammad Salar Khan Instagram: @salars_catalogue Updates: github.com/dev-flowstate/SAT-Smart-Mistake-Sheet												
Date	Section	Topic / Question Type	Bluebook Test	Module	Q #	Mistake Type	What Was the Mistake?	Why It Happened (Root Cause)	How to Avoid Next Time	Priority	Status	Question Screenshot
1/15/2026	Math	Systems of Linear Equations	Test 4	Module 2	Q12	Used wrong strategy	Set up one equation backwards, solved for wrong variable	Rushed translating the word problem into equations without re-reading	Underline what the question actually asks before solving	High	Reviewing	
9/12/2026	Reading & Writing	Transitions	Test 5	Module 1	Q7	Misread the question	Picked 'However' but sentence 2 continues the idea	Skipped the second sentence	Read both sentences before looking at choices	High	Not Reviewed	
9/13/2026	Math	Percentages	Test 6	Module 2	Q14	Calculation error	Applied 25% and 10% to the original price	Added the discounts instead of chaining them	Apply each discount to the new price	Medium	Reviewing	
9/14/2026	Reading & Writing	Words in Context	Test 6	Module 1	Q3	Vocabulary / wording confusion	Chose 'meticulous' - sounded formal	Did not know 'tenuous'	Add unknown words to a flashcard deck	Low	Mastered	
9/15/2026	Math	Systems of Linear Equations	Test 7	Module 1	Q9	Used wrong strategy	Solved for x when the question asked for y	Did not re-read the question	Circle what the question asks	High	Reviewing	

1 Section and Topic — pick from lists; the topics follow the section

3 Mistake Type and notes — what went wrong and how to avoid it

5 Question Screenshot — a picture of the question, click it to zoom

2 Bluebook Test, Module, Q # — where the question came from

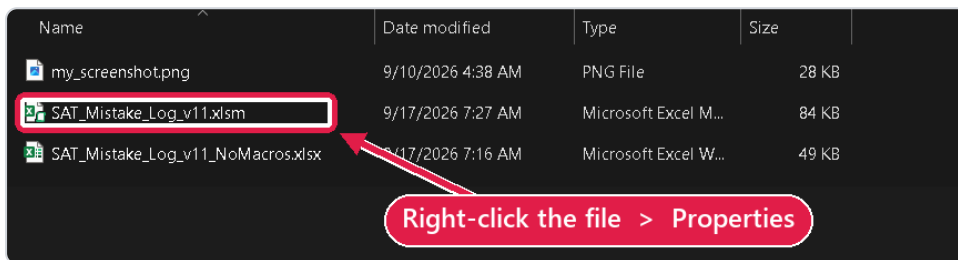

4 Priority and Status — colour themselves red, yellow, green

Turn on the buttons

Windows marks any file that came from email, WhatsApp or a website as untrusted, and Excel switches its buttons off. Clear that mark once and it stays cleared.

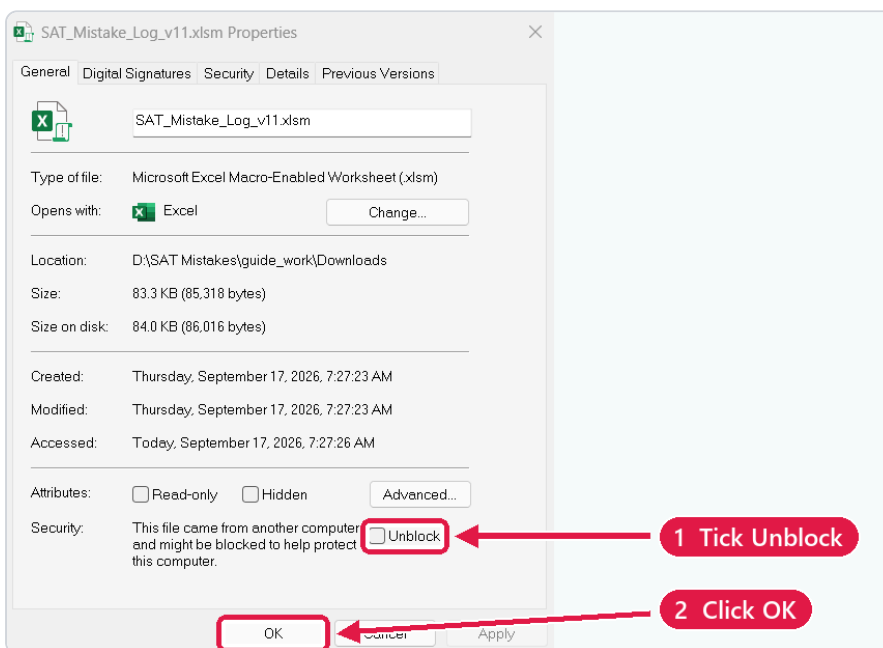

1 Find the file and open its Properties

Close Excel first. Open your **Downloads** folder, right-click **SAT_Mistake_Log_v11.xlsm** and choose **Properties**.

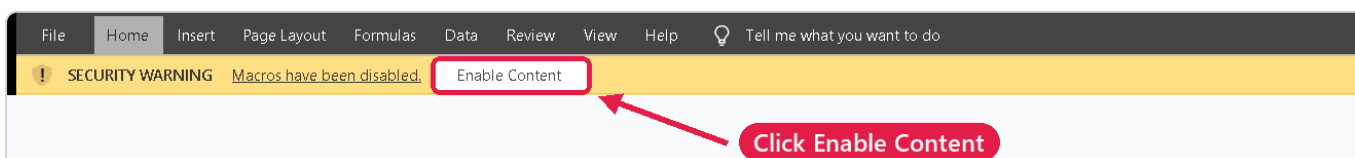

2 Tick Unblock, then click OK

At the bottom of the **General** tab, tick **Unblock** and press **OK**. If there is no Unblock box, the file is already fine — skip to step 3.

3 Open the file and click Enable Content

Double-click the file. A yellow bar appears under the ribbon — click **Enable Content**. Excel remembers this for the file.

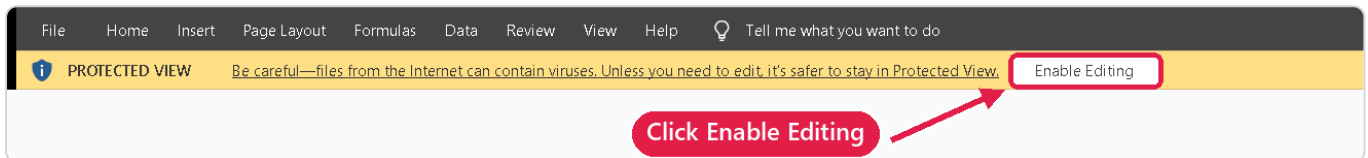

The other two warnings

These appear when the file still carries the "downloaded" mark. Neither means anything is wrong with the log.

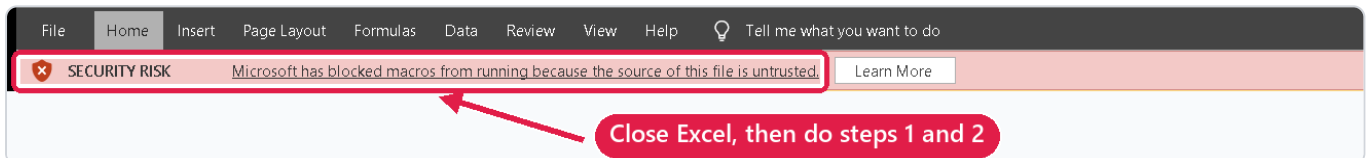

Yellow “PROTECTED VIEW” bar

Excel opened the file read-only. Click **Enable Editing**. If a red bar appears next, see below.

Red “SECURITY RISK — Microsoft has blocked macros” bar

This bar has **no button to enable anything** — that is normal. It means step 2 was skipped. Close Excel, do steps 1 and 2 on the previous page, and open the file again.

Is it safe to enable?

Excel shows these warnings for **every** file with macros, not specially for this one. The macros in this log only move the buttons, show the dropdown menus and place pictures inside the file. They do not use the internet, run other programs, or read or save files on your computer. You can read every line of the code on the [GitHub](#) page below.

Would rather not enable macros, or not on Windows?

Use **SAT_Mistake_Log_v11_NoMacros.xlsx** instead. Everything in Parts 2 and 4 works the same — you pick values with the small arrow at the edge of the cell rather than the button, and add pictures with **Insert > Pictures > This Device**.

Google Sheets is not supported

Uploading the file to Google Sheets breaks the link between Section and Topic. Use Excel on Windows or Mac.

Pick values with the button

Use one row per question you got wrong. Almost every column is a list, so there is very little typing.

4 Click a cell, then Choose

Click any cell under **Section**, **Topic**, **Bluebook Test**, **Module**, **Mistake Type**, **Priority** or **Status**. A dark **Choose ▼** button appears in the middle of it.

4	Date ▼	Section ▼	Topic / Question Type ▼	Bluebook Test ▼
8	9/14/2026	Reading & Writing	Words in Context	Test 6
9	9/15/2026	Math	Systems of Linear Equations	Test 7
10	9/16/2026	Choose ▼		
11				

Click the Choose button

5 Click an option

The list opens under the button. Click your answer and it goes into the cell. (**clear this cell**) at the bottom empties it.

4	Date ▼	Section ▼	Topic / Question Type ▼	Bluebook Test ▼
8	9/14/2026	Reading & Writing	Words in Context	Test 6
9	9/15/2026	Math	Systems of Linear Equations	Test 7
10	9/16/2026	Choose ▼		
11		Reading & Writing		
12		Math		
13		(clear this cell)		

Click an option

6 Pick the Section first — the Topic list follows it

Choose **Reading & Writing** and the Topic list shows its 11 skills; choose **Math** and it shows the 19 Math skills. If the Topic list is empty, that row has no Section yet.

4	Date ▼	Section ▼	Topic / Question Type ▼	Bluebook Test ▼	Module ▼	Q# ▼	Mis
9	9/15/2026	Math	Systems of Linear Equations		Module 1	Q9	Used
10	9/16/2026	Math	Choose ▼				
12							
13							
14							
15							
16							
17							
18							

Section is Math ...

- Linear Equations (One Variable)
- Linear Equations (Two Variables)
- Linear Functions
- Systems of Linear Equations
- Linear Inequalities
- Equivalent Expressions
- Nonlinear Equations
- Nonlinear Functions
- Ratios, Rates & Proportions
- Percentages
- One-Variable Data & Distributions
- Two-Variable Data & Scatterplots
- Probability
- Inference from Sample Statistics
- Evaluating Statistical Claims
- Area & Volume
- Lines, Angles & Triangles
- Right Triangles & Trigonometry
- Circles
- (clear this cell)

... so only Math topics are listed

Question number, notes and colours

7

Q # — type only the number

Type **12**, not "Q12". The Q is added for you. Question numbers restart in Module 2, so fill in **Module** too — otherwise you will not find the question again.

Bluebook Test	Module	Q#	Mistake Type	
Test 6	Module 1	Q3	Vocabulary / wording confusion	Chose 'r
Test 7	Module 1	Q9	Used wrong strategy	Solved f for y
Test 8	Module 2	Q12		

Just the number
Type only the digits,
e.g. 12. Excel shows it
as Q12.

Type 12 - it shows Q12

8

Priority and Status colour themselves

High and **Not Reviewed** turn red, **Medium** and **Reviewing** yellow, **Low** and **Mastered** green. Update Status as you revise.

Priority	Status
High	Reviewing
High	Not Reviewed
Medium	Reviewing
Low	Mastered
High	Reviewing
High	Not Reviewed

Colours fill in by themselves

Write the three notes like this

- **What was the mistake?** — exactly what you did: *"Solved for x when the question asked for y."*
- **Why it happened** — one level deeper: *"Did not re-read the question before answering."*
- **How to avoid it** — an action, not "be careful": *"Circle what the question asks before solving."*

Finding rows fast

The small arrow on each blue heading is a **filter**. Before a test, filter **Priority** to **High** and **Status** to **Not Reviewed** to see only what still needs work.

What is locked

You can type in rows 5 to 304 — 300 mistakes. The title, headings, dashboard, instructions and dropdown lists are locked so nothing important is deleted by accident.

Add a picture of the question

Seeing the original question later is what makes the review work. Each row holds one picture.

9 Copy a screenshot of the question

Press **Win** + **Shift** + **S**, then drag a box around the question in Bluebook. It is now copied — nothing is saved yet.

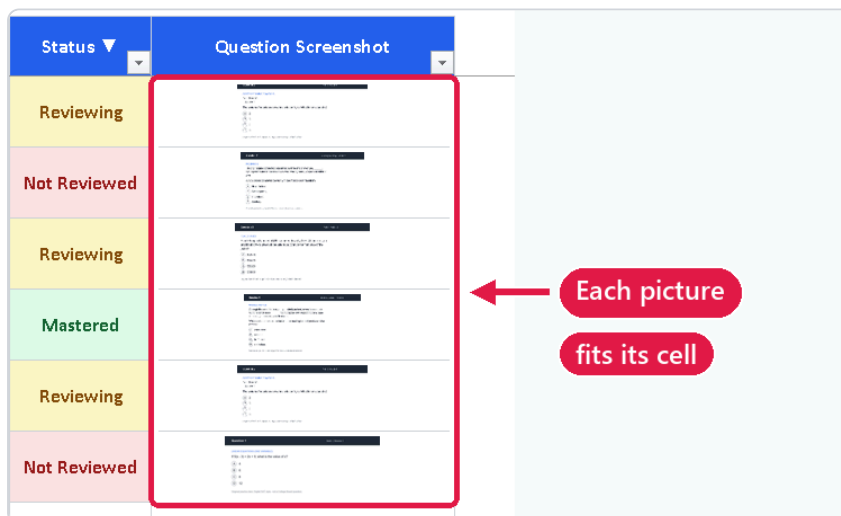

10 Click the row's Question Screenshot cell and press Ctrl + V

Click the cell in the **Question Screenshot** column, then press **Ctrl** + **V**. Or click **Add Photo** to pick an image file instead.

11 It shrinks to fit inside the cell

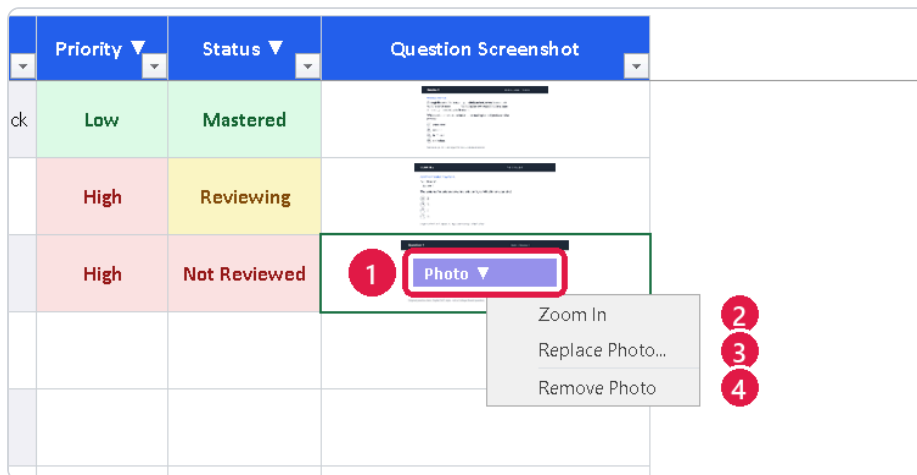

The picture is saved **inside** the log, so it stays with the file if you email it to your teacher. It also moves with its row if you sort or filter.

Zoom, replace or remove a picture

12 Use the Photo menu

Click a Question Screenshot cell that already has a picture **1** and its button says **Photo ▼**. Click it to open the menu:

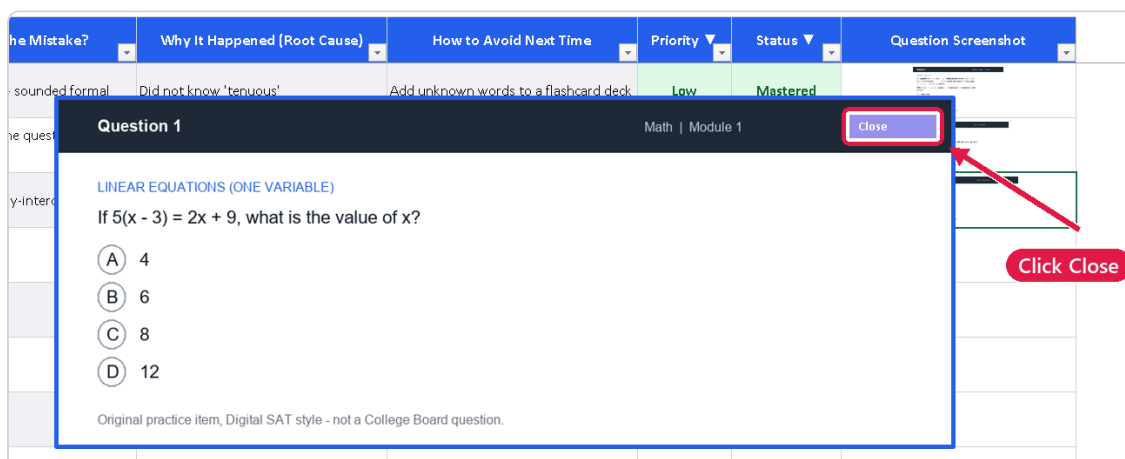

2 Zoom In — shows the picture large in the middle of the screen

3 Replace Photo... — pick a different image file for this row

4 Remove Photo — deletes the picture from this row

13 Put a zoomed picture back

Click **Close**, or click the big picture itself.

To...	Do this
Add a picture	Copy a screenshot, click the cell, Ctrl + V — or click Add Photo
Zoom in	Click the picture — or Photo ▼ > Zoom In
Replace it	Press Ctrl + V on the same cell again — or Photo ▼ > Replace Photo
Remove it	Click the cell and press Delete — or Photo ▼ > Remove Photo

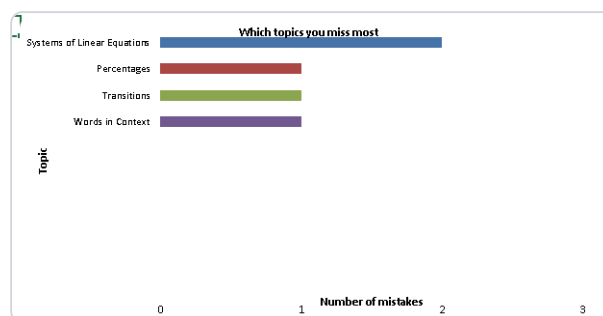

Use the Dashboard to decide what to study

Mistake Log Dashboard			
Made by Muhammad Salar Khan		Instagram: @salars_catalogue	
Mistakes by Section		Mistakes by Type	
Section	Count	Mistake Type	Count
Reading & Writing	2	Careless / silly error	0
Math	3	Misread the question	1
		Didn't know the concept	0
		Ran out of time	0
		Used wrong strategy	2
		Calculation error	1
		Second-guessed correct answer	0
		Vocabulary / wording confusion	1
		Other	0
Status Overview		Priority Breakdown	
Status	Count	Priority	Count
Not Reviewed	1	High	3
Reviewing	3	Medium	1
Mastered	1	Low	1
Total Mistakes Logged			5
Your Top Repeat Offenders (study these first)		Mistakes by Bluebook Test	
Topic	Times Missed	Test	Count
Systems of Linear Equations	2	Test 4	1
Percentages	1	Test 5	1
Transitions	1	Test 6	2
Words in Context	1	Test 7	1
		Test 9	0

Study these topics first

Click the **Dashboard** tab at the bottom of Excel. It updates by itself as you log.

Your Top Repeat Offenders ranks the topics you miss most often. Work down that list, top first — it is where your points are.

Each bar is a count of logged mistakes. A longer bar means a weaker area.

If something is not working

What you see	What to do
No buttons appear in the cells	Macros are off. Follow Part 1, or use the NoMacros file.
Red “blocked macros” bar	Close Excel, right-click the file > Properties > tick Unblock > OK.
The Topic list is empty	Pick a Section in that row first.
A pasted picture stays big	Click any cell — it fits itself in. If it never does, macros are off.
“The cell is on a protected sheet”	That area is locked on purpose. Type in rows 5 to 304.
Using a Mac or Excel on the web	Use the NoMacros file.

Get the latest version

New versions and fixes are posted at github.com/dev-flowstate/SAT-Smart-Mistake-Sheet.
